Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Allowable Subject Matter

Claims 1-11 allowed.

The following is an examiner's statement of reasons for allowance: Matsuda (6,525,347) teaches a method in figure 1B for improving a high speed edge coupled photodetector by forming a coupling facet of said photodetector by etching (device shown in fig. 1B; col. 7, lines 52-54); forming a chemically etched, crystallographically defined semiconductor slope right in front of and below said coupling facet (see fig. 1A & 1B where the photodetector structure has an island-shaped absorption layer that contains a slope; col. 7, lines 28-45); coating said coupling facet with a highly reflective metal film (ref. 9; col. 7, lines 50 & 61-5); and covering said semiconductor slope with an antireflective dielectric film (ref. 13; col. 7, lines 52-57). Prior art does not teach or suggest a method for improving a high speed edge coupled photodetector where the coupling facet is coated with an antireflective dielectric film and the semiconductor slope

is covered with a highly reflected metal film in order to provide for optimal funneling effect.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
